Champion Training

A Three-Day Workshop

Purpose of this Training

To familiarize managers and key support personnel with the core concepts and critical success factors for achieving breakthrough results via Lean/Six Sigma methods, and to develop understanding of their roles and responsibilities in supporting Black Belts and Lean/Six Sigma project teams

Participants Learn...

- ...the origins, principles, concepts and interrelationships of Six Sigma, and Lean thinking
- ...the basics of the Lean/Six Sigma tools, when they should be applied and how they improve results
- ...what to expect of Lean/Six Sigma Black Belts and the support they will need for success
- ...roles and responsibilities of managers and other key support staff related to Lean/Six Sigma
- ...what makes a good Lean/Six Sigma project and how project results are measured
- ...how to provide appropriate leadership and support to ensure successful implementation of Lean/Six Sigma

Why this training is important?

Developing a culture of continuous improvement using Lean/Six Sigma methods requires active, involved leadership at all levels. Managers and key support staff must understand the methods and tools of Lean/Six Sigma so they can reinforce the use of these tools in their areas of responsibility and provide support to Black Belts and project teams.

Managers who attend this training will be expected to begin using some of the more basic Six Sigma tools and methods to solve problems in their day-to-day activities. This will accelerate the cultural transformation by modeling the application of tools and use of the language. The needed leadership and culture change cannot be expected to occur through highly trained Black Belts alone.
